

**New Release!**

The leader in the seed treating industry introduces

# Continuous Treating Systems

for your bulk seed operation

\*Seed Treater Optional

**Compact Design 22'  
3' shorter than any other  
system on the market**

The system utilizes a round designed 150 unit scale hopper that weighs and certifies incoming seed. The system then automatically releases the seed load through an air-gate into the second round 250 unit surge hopper that channels and controls flow into the seed treater.

*This unique system features dual hoppers with air-gates and seed treater all linked and controlled by a single PLC touch screen control panel to operate all treater and bin site functions.*

**Reduces weighing and treating time by over 40%**

#### Features

- Up to 2000 units per hour capacity
- 150 unit round scale hopper with air-gate
- 250 unit round surge hopper with air-gate
- 22' maximum height utilizing a compact design
- Designed to accommodate a USC treater with a seed wheel at this maximum height
- NTEP approved scale
- Updated single 12" PLC touch screen control panel to manage all treater and bin site functions
- USB port for easy software updates that can be performed by the operator
- Custom configurations available
